

Worlds first decentralized news platform on blockchain technology.

CEW

What is Cewnote?

Cewnote is a non-government controlled news platform that combines news creation with decentralized network as a means of providing factual content crafted by a community of readers, writers and reviewers. Cewnote leverages the power of the Ethereum blockchain to design an infrastructure that is virtually impossible to take down. Since Cewnote is not centralized, it is not prone to a single point of failure. The major purpose of the platform is to create news content that is empowering for readers and also representative of the integrity of its writers. Cewnote focuses on becoming the most trusted and democratic news alternative to the mainstream media.

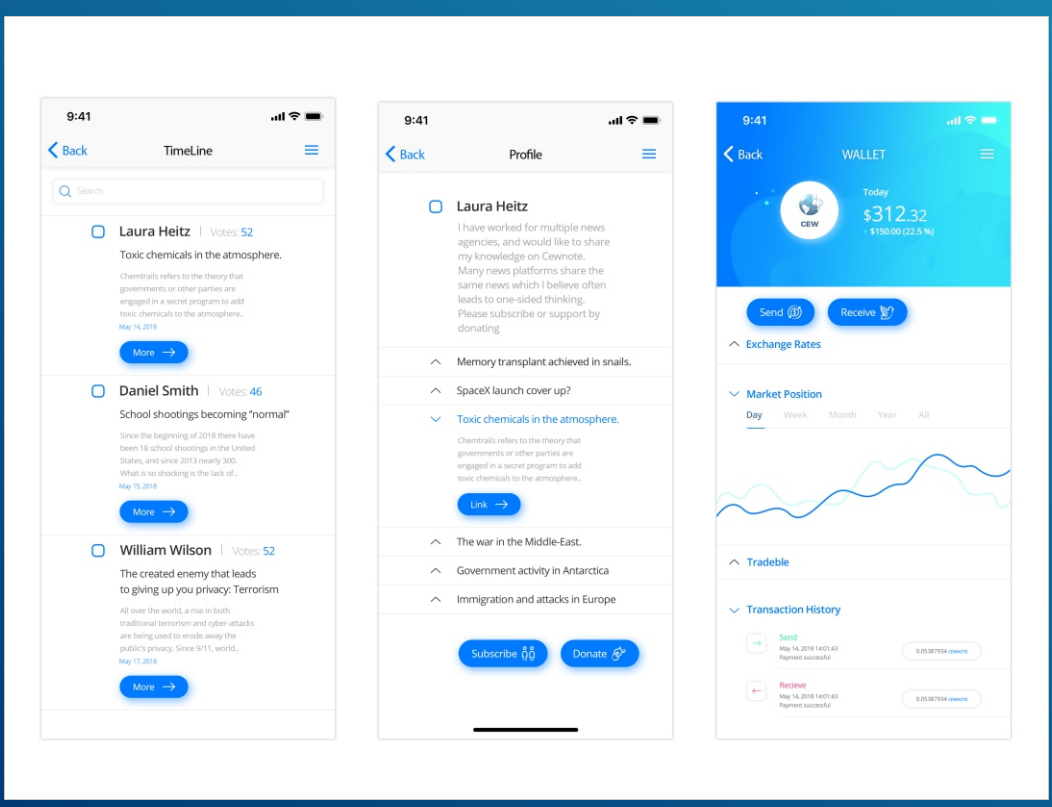

Why Cewnote?

The concept of decentralized news is not a new idea. For instance, Reported.ly dabbled in community driven, internet-based news reporting and dissemination, but the platform failed due to lack of revenue. If news distribution were to function without any central authority, less importance will be given to media titans and there will be a higher degree of autonomy and independence from the ground-up, starting with journalists and ending at readers. Distributors of news can act as vessels through which accurate information can be disseminated without any interference by the community they serve. This leads to greater integrity and fearlessness to report. At the end of the day, Cewnote will allow readers to focus on the content without any corporate influence. The news industry will also become more transparent due to the power and function of blockchain technology. The resulting transparency will give room for a more democratic and free thinking press. Moreover, suppression of information and mass censorship by governments and corporations is a threat to publishers and writers all across the globe. The core purpose of Cewnote is to provide factual news that is curated and community-moderated

Cewnote's Mode of Operation

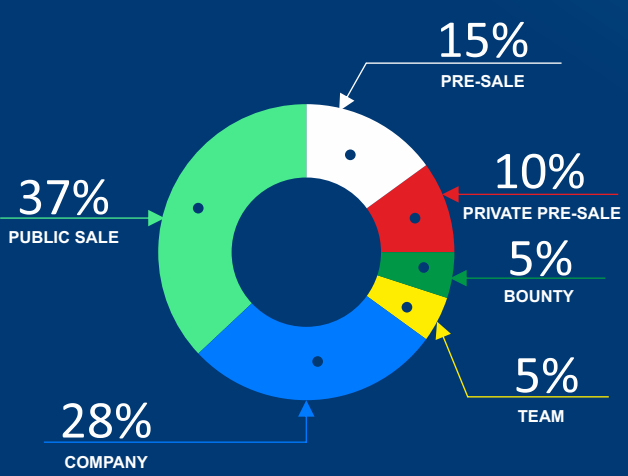

In order to understand how Cewnote will work, let's take a look at the key factors of the network. Cewnote is a decentralized news platform built on the Ethereum blockchain. Such arrangement will allow anyone to submit articles that will be reviewed by anonymous contributors that coordinate without the need for explicit trust. During the review process, contributors will peruse the articles to ensure that they are in line with the network's public set of editorial standards. Each news published on Cewnote is replicated across different community-hosted nodes and made accessible by the public. Readers, writers, reviewers and publishers will be able to earn tokens that are proportional to the amount of positive contributions that are made to the platform.

Cewnote App

The Cewnote mobile app will be available on multiple devices including Apple and Android. The app will make it easy to use the Cewnote platform. Furthermore, the app will be regularly updated to customize the best experience for users. Users will also be able to work or edit offline without any internet connection. Cewnote does not need any of your personal information. Payments will be done in Cewnote tokens (CEW) which provide a safe and secure use on our platform.

CewNote Token

Start: 4 September, 2018
 Number of tokens for sale: 124,000,000 CEW
 Bounty program: 10,000,000 CEW
 Soft Cap: \$6,500,000
 Hard Cap: \$27,380,000
 End: 27 November, 2018
 Tokens exchange rate: We can not confirm the tokens exchange rate until listing.
 Acceptable currencies: ETH, BTC, LTC, NEO, XMR, DASH
 Minimal transaction amount: 0.1 ETH
